Full-stack Software Engineer – **scalable backend services, APIs & data models** in distributed environments, hands-on **React**, working knowledge of **Golang, Kafka & Flink**.

EDUCATION

Thapar Institute of Engineering and Technology

Patiala, India

Bachelor of Engineering in Electronics and Computer Engineering

Aug. 2022 – May 2026

EXPERIENCE

Software Engineering Intern

Jan 2026 – Present

Zscaler

Mohali, Punjab, India

- Collaborated with cross-functional engineering teams to design **scalable backend services and APIs** for Z-POP's central Product Initiative platform, architecting distributed data models across Snowflake, Jira, Salesforce, and PostgreSQL to track **10,000+ enterprise product initiatives**
- Designed **fault-tolerant backend services** and reusable, developer-facing components – dashboards, KPI aggregation engines, action-tracking workflows, roadmap controls, and advanced search used org-wide
- Built fault-tolerant sync pipelines, audit logging, and cache invalidation logic – reasoning through **consistency, performance, and fault-tolerance trade-offs** to achieve **30x+ performance gains** via distributed Redis/Valkey caching

Open Source Contributor

Jun 2025 – Sept 2025

Code for GovTech 2025

Remote

- Built a district-level Land Demarcation Tracker on a **distributed, multi-tiered architecture**, implementing validation pipelines and duplicate-detection algorithms to improve traceability for large-scale government datasets
- Designed GIS-based workflows and optimized frontend-backend integration and relational database queries through iterative, agile development cycles with distributed contributors

PROJECTS

CodeFusion | *React, Docker, Liveblocks, Judge0, LLaMA API* | [GitHub](#) | [Live](#)

2026

- Architected a real-time, distributed collaborative coding platform with a low-latency, fault-tolerant architecture, using **React** component design and synchronized state management across concurrent multi-user rooms
- Integrated a Dockerized Judge0 execution environment with AI-powered debugging workflows using LLaMA models, applying algorithm design to optimize execution performance

LiveCV | *React.js, Node.js, Express.js, MongoDB, Appwrite* | [GitHub](#) | [Live](#)

2025

- Developed a scalable, AI-powered resume builder with live **React** preview and instant PDF generation via a **REST API** backed by a NoSQL (**MongoDB**) data layer
- Implemented authentication and cloud storage integration, and designed responsive, low-latency frontend experiences for cross-device use

FoundriQ | *Next.js, Node.js, Express.js, MongoDB, GenAI* | [GitHub](#) | [Live](#)

2025

- Built a collaborative startup idea platform with a **Next.js/React** frontend and **Node.js/Express** backend, enhanced with GenAI-powered recommendations and structured **data models**
- Developed scalable backend systems, applying object-oriented design for idea management, authentication, and AI-assisted content generation

TECHNICAL SKILLS

Languages: Python, Golang, Java, JavaScript, TypeScript, C/C++, SQL

Frameworks & Libraries: React.js, Next.js, Redux Toolkit, Node.js, Express.js, FastAPI, Tailwind CSS

Databases: PostgreSQL, MongoDB, Redis, Snowflake (relational, NoSQL & distributed data stores)

Distributed Systems & Cloud: AWS, Kafka, Flink, distributed caching (Redis/Valkey), Terraform, Docker, Amazon ECS/ECR

AI/Backend Systems: FastAPI microservices, document chunking, vector embeddings, GPT-4 & LLaMA integration

Core CS Fundamentals: Data Structures, Algorithm Design, Object-Oriented Design, Complexity Analysis, Distributed Systems, System Design, OS, DBMS, Computer Networks

ACHIEVEMENTS

Solved **900+ Data Structures & Algorithms problems** and achieved a **2213 LeetCode Contest Rating**, reflecting strong algorithm design and complexity analysis skills

Won **3rd Prize** at the IBM TechXchange Hackathon for building ClauseGuard

Secured **3rd place** in ACM TIET CodeSprint among 100+ participants

Earned the **AWS Certified Cloud Practitioner** certification
